

Ch #4

★ Basics of Job Analysis:

Definition:

o Job analysis is the systematic process of collecting and making judgment about all the important information related to a job.

o Job analysis is the procedure through which you determine the duties and nature of the jobs and the kinds of people who should be hired for them.

o You can utilize the information it provides to write job description and job specifications that are utilized in recruitment and selection, Compensation and training and Performance appraisal.

Purposes of the job Analysis:

o job analysis is used to achieve the information in following areas:

- 1) Major duties or activities performed
- 2) Conditions under which the job is performed.

=> So this process helps us to learn the following concepts:

Jobs o A group of tasks that must be performed if an organization achieve its goals.

Positions o The tasks and responsibilities performed by one person, there is a position for every individual in an organization.

Tasks

o A distinct, identifiable work activity composed of motions.

Duties o A larger work segment composed of several tasks that are performed by an individual.

Responsibility:

o An obligation to perform certain tasks and duties.

Book definition:

⇒ Job analysis is a systematic process of describing and recording information about job behaviour, activities, and worker specifications.

⇒ Typically, the information described and recorded includes the:

- Purposes of a job
- Performance criteria
- Tools and Technology used in the job
- Competencies (ie Skills, knowledge, abilities, and other attributes).
- Conditions under which the job is performed.
- Major duties, activities or tasks required of job holder.

* Types of Job analysis information-

⇒ Considerable information is needed if job analysis is to be accomplished successfully.

⇒ HR specialist normally collects one or more of the following types

of information via the job analysis.

i) Work activities:

○ Such as cleaning, selling, teaching, or painting.

○ This list may also contain how, why and when the worker performs each activity.

ii) Human behaviour:

○ Information about human behaviours the job requires, like:

- Sensing
- Communicating
- Lifting weights
- walking long distances

iii) Machines, tools, equipment, and work aids:

○ Information regarding tools used,

- materials processed
- knowledge dealt with or applied
- Services rendered (counseling or teaching)

iv) Performance standards:

Information about the job's performance standards (in terms of quantity or quality levels for each job duty for instance).

v) Job context:

Information about such matters as physical working conditions, work schedule, incentives, and, for instance, the number of people with whom the employee would normally interact.

vi) Human requirements:

Information such as knowledge or skills (education or skills) and personal attributes (aptitudes, personality interests).

* Questions job analysis should answer:

- What physical and mental tasks does the worker accomplish?
- When does the job have to be completed?
- Where is the job to be accomplished?

- How does the worker do the job?
- Why is the job done?
- What qualifications are needed to perform the job?

* When job analysis is performed?

⇒ Job analysis is conducted under the following situations:

• When the organization is founded
⇒ When organizations are created complete information about jobs to be performed is collected through job analysis.

- When new jobs are created.
- ⇒ When jobs are changed significantly as a result of new technologies, methods, procedures, or systems job analyzing them job analysis is conducted.

Uses of job analysis:

i) Recruitment and selection:

job descriptions and job specifications are formed from the information gathered from a job

analysis, which help management decide what sort of people to recruit and hire.

2) Compensation & job evaluation
 • The estimated value and the appropriate compensation for each job is determined from the information gathered from a job analysis.

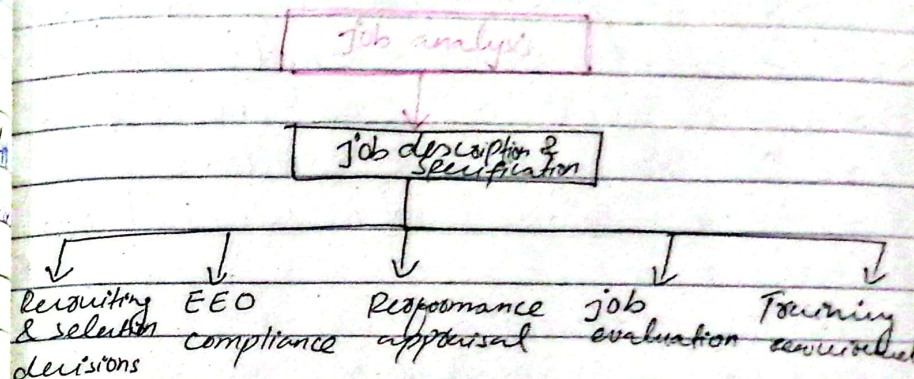

3) Performance Appraisal
 • Managers use job analysis to determine a job's specific activities and performance standards.

4) Training
 • Based on the job analysis, the job description should show the required job activities and skills.

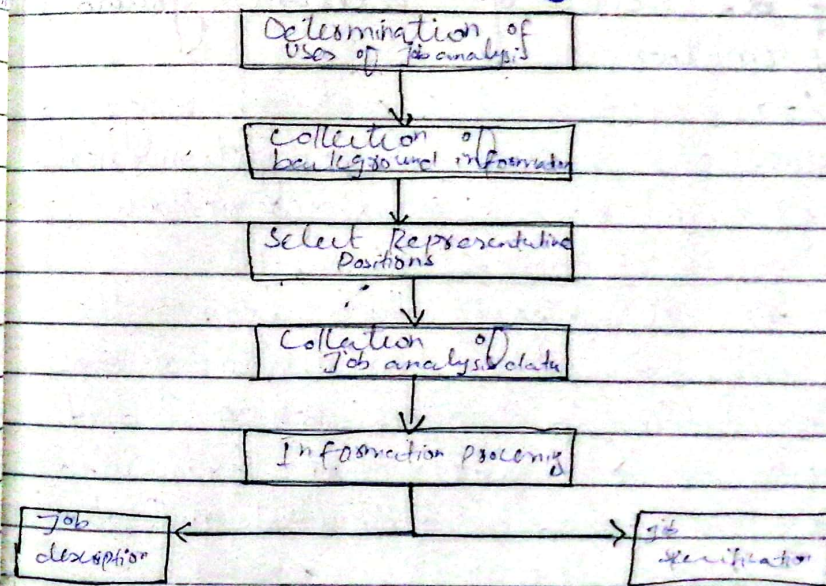

5) Discovering unassigned duties
 • Job analysis can help reveal unassigned duties.

6) EEO Compliance
 • The uniform Guidelines on Employee Selection stipulate that job analysis

is a crucial step in validating all major personnel activities.

Step in Conducting Job analysis

Step 1: Determine the use of job analysis information.

⇒ It includes how the information will be used because that will determine what data will be collected and how it should be collected.

⇒ Some data collection techniques are:

- Interviewing
- Position analysis
- Questionnaire

Step 2: Review of Relevant ground Information

⇒ Review relevant background information, such as organization chart, process charts and job descriptions.

Organization chart:

⇒ A chart that shows the organization-wide distribution of work with titles of each position and interconnecting lines that show who reports to and communicate with whom.

Process chart:

⇒ It provides a more detailed picture of the work flow.

⇒ A work flow chart that shows the flow of inputs to and outputs from a particular job.

Workflow analysis

⇒ Workflow analysis is a detailed study of the flow of work from job to job in a work process.

⇒ Usually analyst focuses on one identifiable work process, rather than on how the company gets all its work done.

Job redesign

⇒ Job redesign includes:

- Job enlargement
- Job rotation
- Job enrichment

Job enlargement:

⇒ It is defined as the process of aligning various tasks and other duties to the job of the employee.

⇒ It includes same level of job duties.

⇒ It refers to horizontal expansion of the job.

e.g

HR managers → Marketing Managers → Production managers → Sales managers

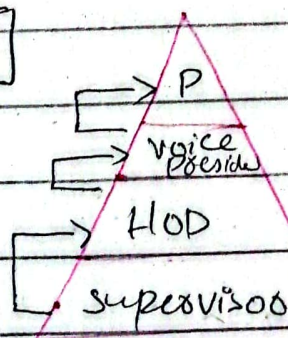

Clerk → Typing → Copying → Sorting

Job enrichment: - Expansion of "job" to the higher level.

⇒ it refers to vertical expansion of the jobs.

⇒ Redesigning jobs in a way that increases the opportunities for the worker to experience feeling of responsibility, achievement, growth and recognition.

⇒ e.g

∴ Job becomes more challenging & less repetitive.

∴ it does this by empowering employees.

Job rotation: -

⇒ Systematically moving workers from one job to another.

Note: Often effectively used as training technique for new, inexperienced employees

⇒ Changing employee positions within the same organization and eventually returning to the original position.

Types of job rotations

↓ Task rotation ↓ Position rotation

e.g. Moving a nurse from one ward to another ward.

e.g. A marketing department employee could be moved to sales for a short period of time to understand customer needs better.

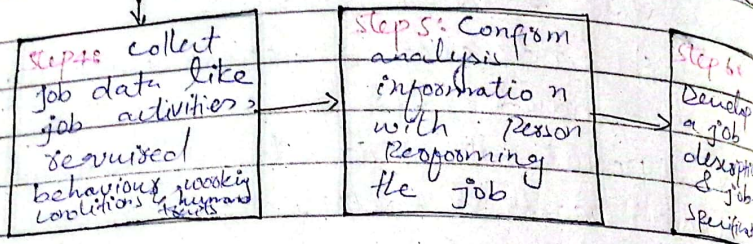

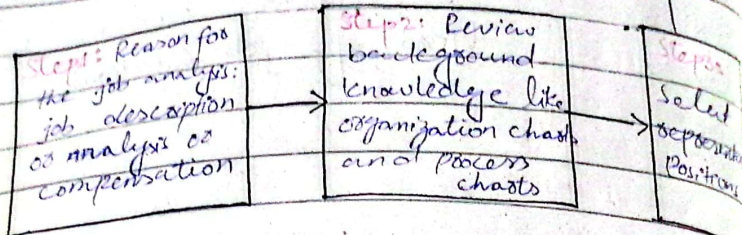

Step 5:- Verify the job analysis information with the worker performing the job and with his or her immediate supervisor

Review and verify the job analysis information with job incumbents to confirm that it is factually correct and complete.

Step 6: Develop a job description and job specification from the job analysis information.

Whether or not the manager decides to redesign jobs via workforce analysis, process redesign or job redesign.

Job analysis Process:

Job analysis Outcomes:

- a) Job descriptions → detailed info about the job
- A statement showing human traits and experience are required to do this job well.
 - It shows what kind of person to recruit and for what qualities the person should be tested.

Purpose: used to provide relevant and suitable information about job.

What are the major requirements for a particular job

⇒ A job description is a written statement of what the jobholder actually does, how he or she does it, and under what conditions the job is performed.

⇒ There is no standard format for writing job descriptions, but most descriptions include sections on:

- job identification
- job summary
- Relationships, responsibilities and duties
- Authority of incumbent
- Standards of performance
- Working Conditions
- Job Specifications
- job location

b) Job specifications

⇒ A job specification is a document containing the minimum acceptable qualifications that a person should possess in order to perform a particular job.

⇒ Items typically included in the job description specification are educational requirements, experience, personality traits, qualifications, etc.

and physical abilities.

c) Job evaluation

=> In job evaluation process the worth of job is identified based upon job comparability and according to worth, importance of job and relative value compensation is designed and selected.

Key terms

Job identification:-

↳ Contains the job title, the FLSA status, date and possible space to indicate who approved the description, the location of the job, the immediate supervisor title, salary and pay scale.

Job Summary:

↳ Should describe the general nature of the job, and includes only its major functions or activities.

Q#: Write a Comprehensive note on Job analysis methods.

⇒ Job analysis has been conducted in a number of different ways.

⇒ Also, and in forms differ in their needs

for conducting job analysis.

⇒ An HR specialist, a worker, and the worker's supervisor usually

work together in conducting the job analysis.

⇒ Job analysis methods are usually collected from several employees from different departments, using interviews and questionnaires.

⇒ Interviews In this method, the job analyst directly interviews the job holder through a structured interview form to elicit information about the job.

These are three types of interviews managers use to collect job analysis data.

⇒ This method helps interviewees know what exactly an employee thinks about his or her own job and responsibilities involved in it.

1) Individual

↳ To get the employee's perspective on the job duties and responsibilities.

2) Groups

↳ When large number of employees perform the same job.

⇒ In this method, an employee is interviewed so that he or she comes up with their own working style, problems, ~~use of particular skills, and~~ ~~by them~~ ~~Supervisors~~ techniques while performing their job.

↳ To get his perspective on the job duties and responsibilities.

Interview formats → structured (checklist)
→ unstructured

Pros:

The pros of using an interview are that it is:

Simple

Quick

more Comprehensive

because the interviewer can unearth activities that may never appear in written form.

Cons:

↳ Time Consuming

↳ Also suffers from personal biasness

↳ The following questions are some examples of typical questions:

o What is the job being performed?

o In what activities do you participate?

o What are the health and safety conditions?

↳ The following are interview guidelines

o The Job analyst and Supervisor shall identify the workers who know the

e.g. a really understand the job of software designer who develops customize programs for commercial parties, you might interview job holders, their supervisors, members of their product design job best and would be objective.

- o Establish a rapport with the interviewee

- o Follow a structured guide or checklist

- o Ask workers to list duties in order of importance and frequency of occurrence

- o Review and verify the data

Questionnaire:

↳ Structured or unstructured questionnaire may be used to obtain job analysis information.

↳ Questionnaires can be a quick, efficient way of gathering information from a large number of employees.

↳ This method is usually employed by engineering consultants.

↳ Properly adapted questionnaires are sent out to job holders for completion and are returned to supervisors.

Cons:

↳ Time consuming

↳ Expensive

↳ A great care should be taken while formulating questions for different grades of employees.

⇒ Generally this method does not yield satisfactory results because many employees do not complete the questionnaire or furnish incorrect information because of their own limitations.

Uses:

↳ Use of questionnaire is recommended only in case of those technical jobs where the job contents are not completely known to the supervisor.

↳ There are certain standardized questionnaires developed by a few agencies which are used by various organizations for job analysis.

↳ Most of these questionnaires are of two types:

- o Position analysis
- o Management position description

Observation:

↳ Using this method, a job analyst watches employees directly on the job.

↳ Observations are made on various tasks, activities, the pace at which

↳ it may include videotaping, and taping and computer monitoring.

tasks are carried out, and the different activities are performed.

⇒ Direct observations are useful when jobs consist of mainly observable physical activity as opposed to mental activity.

↳ Reactivity can be a problem with direct observations which is where the worker changes.

→ Difficulty in capturing entire job cycle

⇒ Managers often use direct observation and interviewing together.

Pros: Provides first hand information
o Reduces distortion of information

Cons: Workers can be to keep participant diary/logs or lists of things they do during the day.

↳ For every activity he or she engages in, the employees record the activity (along with the time) in a log.

↳ This can provide a very comprehensive picture of the job.

↳ This method provides more accurate information if done faithfully.

Pros: produces a more complete picture of the job.
o Employee participation.

Conse

- o Time Consuming
- o Each job holder may maintain records according to his own way which presents problems in analysis at later stage.
- o Therefore, it has limited application.

Critical incidents:

- ↳ In this method, job holders are asked to describe incidents concerning the job on the basis of their past experience.
- ↳ The incidents so collected are analyzed and classified according to the job areas they describe.
- ↳ A fairly picture of actual job requirements can be obtained by distinguishing between effective and ineffective behaviors of workers on the job.

Conse

- ↳ Time Consuming
- ↳ High degree of skill required to analyze the contents of descriptions given by workers.

Technical Conference method:

- ↳ This method utilizes the supervisor's with extensive knowledge of the job.
- ↳ Here, specific characteristics of a job are obtained from the experts.
- ↳ Although it is a good data gathering method, it often overlooks the incumbent workers' perception about what they do on their job.

Job performance:

- ↳ Under this method, the job analyst actually performs the job under study to get first-hand experience of the actual tasks, and physical and social demands of the job.

Use:

- ↳ Used for only those jobs where skills requirements are low and can be learnt quickly and easily.

Conse:

- ↳ Time Consuming
- ↳ Not appropriate for jobs requiring extensive training.

Quantitative job analysis techniques

it can be used to analyze a wide variety of jobs that involve different types of tasks and duties.

1) Position analysis

↳ is a highly specialized instrument for analyzing a job in terms of employee activities.

↳ Developed by Purdue University. It measures the work behaviors, scenarios by posing a job and relates them to worker characteristics.

↳ it provides a quantitative score or profile of any job in terms of how that job rates on the basic activities.

Cons

↳ Major problem with PAQ is the time it takes for a job analyst to fill out the ratings.

2) Department of labour procedure

↳ is a standardized method for rating, classifying and comparing virtually every kind of job based on data, people and things.

3) Functional job analysis:

↳ It is employee oriented analytical approach of job analysis.

↳ This approach attempts to describe the whole person on the job.

↳ Main features:

1) The extent to which specific instruction are necessary to perform the task.

2) The extent to which reasoning and judgment are required to perform the task.

3) The mathematical ability required to perform the task.

4) The verbal and language facilities required to perform the task.

Q#: What are source of data for job analysis?

- o Employees
- o Supervisor
- o Managers
- o Job analyst
- o outside consultant.

Problems with job analysis:

↳ Too lengthy ↳ Time consuming? requires much patience.

↳ Might be a selection of stereotypes

Comparison Chart

Job description

Meanings -> describes the

=> Job description is a concise written statement, explaining about what are the major requirements of a particular job.

Lists out

=> Job titles, duties, tasks and responsibilities involved in a job.

What is it?

=> it expresses what a prospective employee must do when he will get the placement.

Prepared from

o Job analysis

Describes

o jobs

Content

Duties and responsibilities

Job Specification

Describe job

=> The statement which explains the minimum eligibility requirements for performing a particular job.

=> Employees' qualifications, skills and abilities.

=> it expresses what an applicant must possess for getting selected.

o Job descriptions

o Job holders

Qualifications

Comprises of

=> Designation, place of work, scope, salary range, working hours, responsibilities, reporting authority etc.

=> Educational qualifications, experience, skills, knowledge, age, abilities, work orientation factors etc.

Q# Steps to write job description

A job description defines:

- o what, where, when and how job tasks are done.
- o what equipment, machines or tools are used?

=> A broad, general, and written statement of a specific job, based on the findings of a job analysis. it generally includes duties, purpose, responsibilities, scope and working conditions of a job along with the job title and the name or designation of the person to whom the employee reports. job description usually forms the basis of job specification.

Contents of job description:

- o Job identification
- o Job summary
- o Job duties and responsibilities
- o Working conditions
- o Social environment
- o Machines, Tools and equipment
- o Supervision
- o Relation to other jobs

Job identification →

⇒ job identification and organizational position which includes job title, code numbers of the job, ^{FLSA identifies job} department or division where the job is located. This part of job description helps to identify and designate the job.

Job summary it is synopsis of the job

⇒ Job summary should summarize the essence of the job

⇒ Job summary describes the contents ^{and} of the jobs in terms of activities ^{or} tasks performed.

⇒ Job summary should clear the nature of the job.

↳ it is used during recruitment to create
⇒ Primary, secondary and other duties to be performed on the job should clearly be indicated separately.

Job duties and responsibilities:

↳ This is the most important phase of job description and should be prepared very carefully.

↳ It describes the duties to be performed along with frequency of each major duty.

↳ Responsibilities concerning custody of money, supervision and training of staff etc.

↳ This is the heart of job description.
Relation to other jobs:

↳ it describes the vertical and horizontal relationship work flow

↳ it also indicates to whom the jobholder will report and who will report to him.

↳ it gives an idea of channels of promotion.

↳ Relationship statement shows the job holder's relationship with others inside and outside the organization.

For him, such a statement might look like this.
Reports to: Vice President of employee relations.
Supervises: HRM clerk, labor relation clerks
works with: All department managers and executive managers
includes the company employment agencies

Working Conditions:-

- Working conditions usually give us information about the environment in which a job holder must work.
- The working environment in terms of heat, light, noise, dust and fumes etc.
- it will be helpful in job evaluation.

Social environments

- it specifies the social conditions under which the work will be performed
- In this part the size of work group, interpersonal interactions required to perform the job and developed facilities are mentioned.

Machine

- Machine, tools and equipment define each major type or trade name of the machines and tools and the raw materials used.

Standards of performance:

- This section lists the standards the company expects the employee to achieve for each job description, main duties and responsibilities.

* Using the internet for working the job description (on last page)

Uses of job - description:

Job description is helpful in the following areas of HRM:

- Job grading and classification
- Placement of new employees on a job.
- Promotions and transfers
- Orientation of new employees towards basic duties and responsibilities.

#What are contents of job specification?

A job description should include:-

i) Physical characteristics

- which includes health, strength, endurance, age, height, weight, vision, voice, eye, hand and foot, coordination and motor coordination, and color coordination.

ii) Psychological characteristics

- Such as emotional stability, flexibility, decision making ability, analytical and mental ability, pleasing manners, initiative, conversational ability etc.

Mental characteristics

o Such as general intelligence, memory, judgement, ability to concentrate, foresight etc.

Personal characteristics

o Such as sex, education, family background, job experience, hobbies, extra-curricular activities etc.

What is job design? And methods of job design?

Job design:-

↳ Job design is the process of establishing employees roles and responsibilities and the systems and procedures that they should use or follow.

↳ The main purpose of job design or redesign, is to coordinate and optimise work processes to create value and maximise performance.

↳ Organizing tasks, duties, and responsibilities into a productive unit of work.

Why job design?

↳ The firm I have realized that the design of a job has considerable influence on the productivity and job satisfaction. Poorly designed jobs often result in boredom to the employees, increased turnover, job dissatisfaction, low productivity and an increase in overall costs of the organization. All these consequences can be avoided with the help of proper job design.

Methods of job design:-

The various techniques of job design and redesign are discussed below.

Job Simplification:-

↳ In job simplification, the complete job is broken down into small subparts, this is done so that the employees can do these jobs without much specialized training.

↳ Moreover, small operations of the job can also be performed simultaneously so that the complete operation can be done more quickly.

↳ For job simplification, generally time and motion studies are used.

Job rotation:

<u>Pros</u>	<u>Cons</u>
↳ Helps to broaden the knowledge and skills of an employee.	↳ Creates disruptions. Members of the work group have to adjust to the new employee.
↳ Improves the self image and personal worth of the employee.	↳ Training costs are increased.
↳ Broadens the work experience of employees and turns specialist into generalists.	↳ Productivity is reduced by moving a worker into new position just when his efficiency at the prior job was reaching organizational economics.
↳ The employee experiences variety of work.	↳ The supervisor may also have to spend more time answering question and monitoring the work of the recently rotated employee.

Job enrichment:

Pros:

- ↳ increases skills of the employees.
- ↳ it enriches the role.
- ↳ Reduce boredom and dissatisfaction.
- ↳ helps in reducing the rate of labour turnover and absenteeism.

Cons:

- ↳ increase cost
- ↳ Not applicable to all jobs
- ↳ Objected by unions
- ↳ Pay dissatisfaction.

Job enlargement:

- ↳ Increase in diversity of jobs.
- ↳ Job satisfaction
- ↳ Provides variety of skills
- ↳ Reduces tension and boredom.
- ↳ Trains and develops more versatile employees.

Part 1 (Writing job description)

Q#1: How to use internet for writing job description?

⇒ Many employees are turning to the internet for their job description.

⇒ This process is simple. Search by alphabetical title, keyword, category or industry to find the desired job title.

⇒ Using internet we can write generic job description.

for example, Specific information about the organization such as

- job title
- department
- job codes
- preparation date

O*Net:

⇒ One free resource, the US department of Labor O*Net, provides data on over 900 different job titles and the list is continually updated.

⇒ O*Net and its partner site, O*Net Online, provide information on nearly 1000 jobs that are common to many different business and industries.
<http://www.onetonline.org/>

⇒ The US department of Labor's occupational information network, called O*Net, is an increasingly popular web tool.

⇒ Allows users to see the most important characteristics of various occupations, as well as the experience, education and knowledge required to do each job well.

⇒ O*Net also lists skills such as:

Basic Skills:

Reading and writing

Process Skills:

Critical thinking

Transferable Skills:

Persuasion and negotiation

How to use O*Net?

Step 1: Decide on a plan

Step 2: Develop an organization chart

Step 3: Use a job analysis questionnaire

Step 4: Obtain job duties from O*Net.

Step 5: List the job's human requirements from O*Net

Step 6: Finalize the job description.

Q# How to Write job - Specifications?

⇒ The job Specification takes the job description and answers the question

o What human traits and experience are required to do this job effectively?

o It shows what kind of person to recruit and for what qualities you should test that person.

Specification for trained versus Untrained person:

For trained person:

⇒ Writing js for trained employee is relatively straightforward.

⇒ Job Specification might focus on:

o Traits

o Like length of previous service

o Quality of relevant training

o Previous job performance

For untrained person

⇒ Filling jobs for untrained person can be more complex and create problem.

⇒ You must specify qualities like

o Physical traits

o Personality

o Interests

o Sensory skills

Specifications Based on judgment:

⇒ Most job specifications come from the "educated guesses" of people like supervisors and HR managers

⇒ The basic procedure to ask:

"What does it take in terms of education, intelligence, training and the like to do this job well?"

Several ways for getting educated guesses:

↳ Simply review the job duties and deduce from those what skills and traits the job requires.

↳ Using O*Net

↳ Choosing from the competencies listed in web-based job descriptions like those at www.jobdescription.com.

Use Common Sense:

⇒ Use Common Sense when

compiling your list.

⇒ Do not ignore behaviors that may apply to almost any job.

job-related behaviors:

- 1) Industriousness
- 2) Thoroughness
- 3) Schedule flexibility
- 4) Attendance : Arrive on time
- 5) No off-task behaviors
- 6) No unwilliness
- 7) No Theft
- 8) No Drug misuse

Job Specification based on statistical analysis:

○ it is more defensible approach but it is more difficult.

○ The basic purpose of this is to determine the relationship between:

1) Some predictor (human trait height, intelligence)

2) Some indicators or criterion of job effectiveness.

○ There are five steps involved in this procedure:

1) Analyze the job and decide how to measure job performance.

2) Select Personal traits like finger dexterity that you believe should predict successful performance.

3) Test candidates for these traits.

4) Measure these candidates subsequent job performance.

5) Statistically analyze the relationship between the human trait and job performance.

Using task statements:

- Normally job description and job specification are used by employers for summarizing what their job entails but task statements is more popular.
- A job task statements shows:
 - ⇒ what the worker does on one particular job task?
 - ⇒ How the worker does it, and for what purpose?
- For writing task statements for each of the job tasks is to identify the
 - ⇒ Knowledge
 - ⇒ Skills
 - ⇒ Abilities
 - ⇒ and other characteristics needed to do each task.

Shoot Questions Differentiate occupations, job positions and positions:

↳ Refers to the activities carried out by any single person.

↳ Each employee holds one position in organization.

Job:

↳ Refers to positions that are functionally interchangeable in the organization.

Occupation:

↳ Refers to a group of jobs that involve similar work and requires similar competencies, training and credentials.

#Difference between work focused job analysis and task-focused job analysis.

Task-focused job analysis

(RP-2021)

- ↳ Describes what the job involves in terms of work activities and outcomes.
- ↳ The objective is to provide
- ↳ Traditional job analysis focuses on tasks.
- ↳ The question is: what is the content of the job?

Worker-focused job analysis:

- ↳ Identifies the characteristics of job incumbents that are required to perform the job well.
- ↳ The objective is to provide a description of the skills, abilities, attitudes and personality characteristics that lead to successful performance.
- ↳ The question is: who can do the job?

What is Competency?

- ↳ A competency is a measurable pattern of knowledge, skills, abilities, behaviours, and other characteristics that an individual needs to perform work roles or occupational functions successfully.

- ↳ It is one type of worker-focused approach of analyzing job.

What is Competency modeling?

- ↳ For competency modeling, the objective is to describe the competencies of successful employees for a series of progression of several jobs.
- ↳ Used when an organization is developing career paths and developmental.

What is subject matter expert?

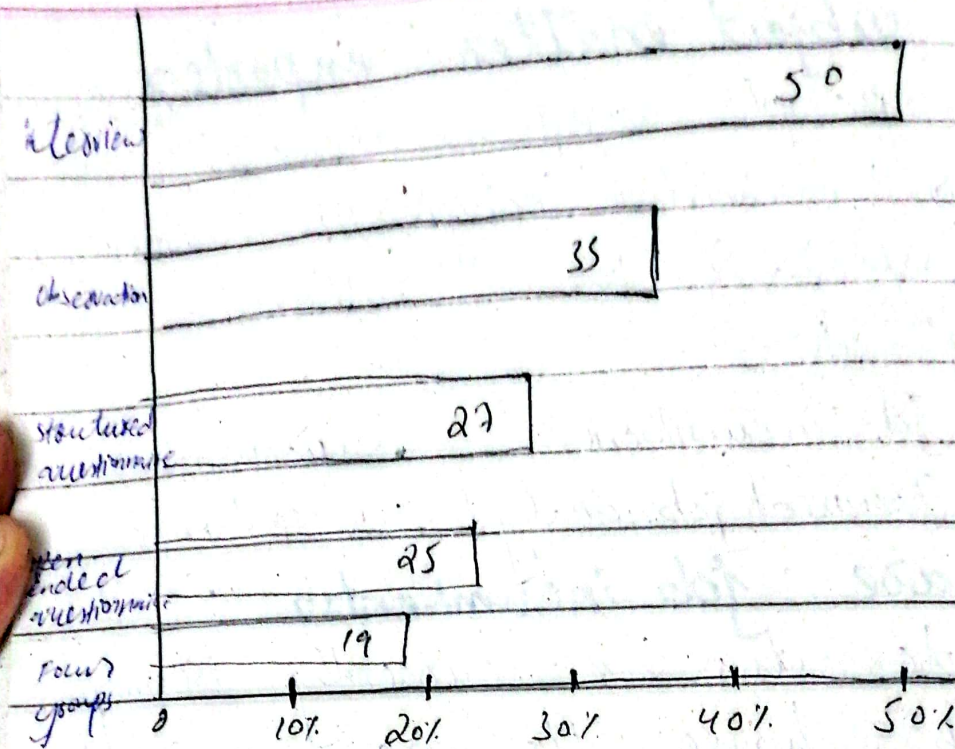

- ↳ The people used as sources of information about specific jobs are often referred to as SMEs.
- ↳ They are:
 - job incumbents
 - supervisors
 - Trained job analyst
 - customers

What are job incumbents?

- ↳ People who are currently doing the job, have the most direct knowledge about the tasks, duties and competencies associated with the job.
- ↳ Incumbents usually provide input into job analysis and competency modeling by participating in an interview or responding to a questionnaire.

What is Management position description questionnaire?

- ↳ The MPDQ is a standardized questionnaire for analyzing the concerns, responsibilities, demands, restrictions and other characteristics.
- ↳ These MPDQ is designed for analyzing managerial positions, responses are expected to vary by managerial level in an organization.

What is time and motion study?

⇒ A time and motion study is a type of job analysis method.

⇒ it involves identifying and measuring a worker's physical movements when performing tasks and then analyzing the results to determine whether some motions can be eliminated or performed more efficiently.
