⇒ A session represent a single client connection to the database.

⇒ A session is a specific connection of a user to an oracle database instance through a user process.

⇒ for example:

when a user starts *SQL*plus, the user must provide a valid username and password, and then session is established for that user.

- A session lasts from the time the user connects until the time the user disconnects or exits the db application.

Server session:

- o Manage session for clients.

Client session:

- o Acts as a dedicated database session for each client/request
