

Q. Discuss the installing and configuring the Android SDK manager and Anatomy of android application?

Installing the Android SDK manager:

⇒ Android Studio comes with pre-installed SDK manager but the user has to configure it according to its needs.

⇒ Steps to configure the SDK manager:

1. Open SDK manager Tab

⇒ on the welcome screen, go to setting and select "Android SDK manager" then a new window will open up.

2. SDK platform Tab:

⇒ In the SDK manager, you will find the "SDK platforms" tab.

- ⇒ The select the versions of Android for which you want to develop for.
- ⇒ make sure to install at least one SDK version.

3. SDK Tools tab:

- ⇒ In the "SDK tools" tab select various tools and libraries that need for development environment.

- ⇒ You can also configure SDK path (Where to install).

- ⇒ Essential items include:

Android SDK Build-Tools
 Android Command-line Tools
 Android Emulator
 Android SDK platform-Tools
 Android SDK Tools

4. Additional Components:

- ⇒ After selecting the components, click the "Apply" button to start the installation process.

- ⇒ Review your selections and click "Next" to confirm and begin the download and installation.

Accept Licenses:-

- ⇒ You may need to accept the terms and licenses for the components you have selected. Ensure you read and accept them to proceed.

5. Downloading and installation:-

- ⇒ The SDK Manager will download and install the selected components.

- ⇒ This process may take some time depending on internet connection and size of the components.

Anatomy of Android apps or Components of android apps:-

- Activities
- Fragments
- Widgets
- Intents
- Views
- Service
- Broadcast receivers
- Content providers
