

Selection

(L1)

What do you understand by Selection process? Discuss various steps involved in it? (PR-2017) Log.

- o Human resource selection is the process of choosing qualified individuals who are available to fill positions in an organization.
- o Selection involves either choosing the fit candidates, or rejecting the unfit candidates.
- o It involves 'a careful screening and testing of candidates who have put in their applications for any job in the enterprise.

Definition: Selection is discriminatory process wherein suitable applicants are provided employment and unsuitable applicants are rejected.

According to Dale Yoder:

"Selection is the process in which candidates for employment are divided into two classes - those who are offered employment, and those who are not.

According to O'Donnell Krontz:

"Managerial Selection is logically choosing from among the candidates the one that best meets the position's requirements."

- o Selection of the employment is a systematic process.

Selection Procedure:

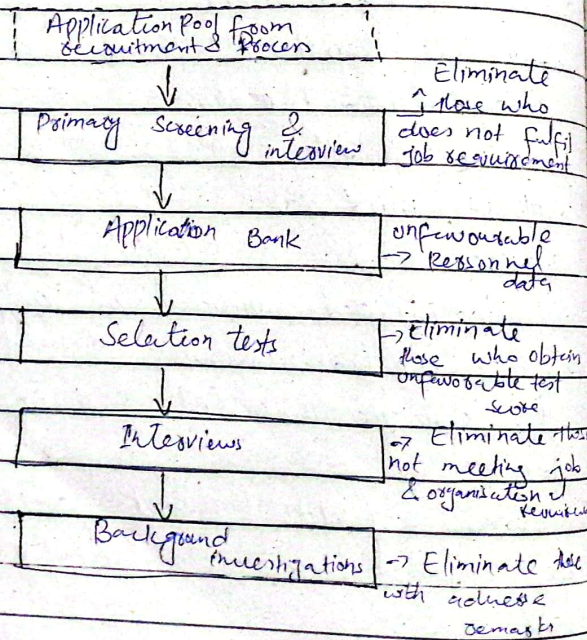

- o The selection procedure consists of a series of steps.
- o Each step must be successfully cleared before the applicant proceeds to the next.
- o The selection process is a series of successive hurdles or barriers which an applicant must cross.
- o These hurdles are designed to eliminate an unqualified candidate at any point in the selection process.
- o This technique is called "successive hurdles technique".
- o The major factors which determine the steps involved in a selection process are as follows:

o Selection process depends on the number of candidate that are available for selection.

o Selection process depends on the sources of recruitment and the method that is adopted for making contact with the prospective candidates.

o Various steps involved in as selection process depend on the type of personnel to be selected.

o A Comprehensive selection process involves the various steps:

Physical examination - Eliminate those who do not meeting physical standards

Approval by appropriate authority - Adopt objectivity

Final employment decision - Congratulate

Evaluation - check the reliability & validity

1) Application Pool:

⇒ Application pool built-up through recruitment process is the base for selection process.

The basic objective at the recruitment level is to attract as much worthwhile applications as possible so that there are more options available at the selection stage.

2) Preliminary Screening & interview:

⇒ It is highly non-economic to administer and handle all the applicants.

⇒ It is advantageous to sort out unsuitable applicants before using the further selection process.

⇒ For this purpose, usually, preliminary interview application blank lists and short test can be used.

⇒ All applications received are scrutinised by the personnel department in order to eliminate those applicants who do not fulfil required qualifications or work experience or technical skills, his application will not be entertained. Such candidate will be informed of his rejection.

3) Application Blank or application Form:

⇒ An application blank is a traditional, widely accepted device for getting information from a prospective applicant which will enable the management to make a proper selection.

⇒ Information is generally taken on the following terms:

- Biographical data:
- Educational attainment
- Work experience
- Salary & benefits
- Other items

4) Selection Tests:

⇒ Many organisations hold different kinds of selection tests to know more about the candidates or to reject the candidates

who cannot be called for interview etc.

⇒ Selection tests normally supplement the information provided in the application form. Such form may contain factual information about candidates:

a) Aptitude Tests:

⇒ Can you learn to do it?

⇒ These measure whether an individual has the capacity or talent ability to learn a given job if given adequate training.

b) Personality tests:

⇒ At times, personality affects job performance. ⇒ These determine the personality traits of the candidate such as cooperativeness, emotional balance etc.

c) Interest tests:

⇒ These determine the applicant's interests.

⇒ The applicant is asked whether he likes, dislikes, or is indifferent to many examples of school subjects.

o Do you want to do it?

d) Performance tests:

⇒ In this test the applicant is asked to demonstrate his ability to do the job.

=> for example, prospective typists are asked to type several pages with speed and accuracy.

e) Intelligence Tests:

=> This aims at testing the mental capacity of a person with respect to reasoning, word fluency, numbers, memory, comprehension, picture arrangement etc.

f) Knowledge tests:

=> These are devised to measure the depth of the knowledge and proficiency in certain skills already achieved by the applicants such as engineering, accounting etc.

g) Achievement test:

=> How do you feel about it?

=> When applicants claim to know something, an achievement test is given to measure how well they know it?

h) Projective test:

=> In these tests the applicants project his personality into free responses about pictures shown to him which are ambiguous.

Interview:

=> An interview is a procedure designed to get information from a person and to assess his potential for the job he is being considered on the basis of oral responses by the applicant to oral inquiries by the interviewers.

=> Interviewer does a formal-in-depth conversation with the applicant to evaluate his suitability.

=> It is one of the most important tools in the selection process.

=> It involves two-way exchange of information.

=> The interview learns about the applicants and the candidate learns about the employer.

Objectives of interviews:

Interview helps:

- o To obtain additional information from the candidate.
- o Facilitates giving to the candidate information about the job, company, its policies, products etc.
- o To assess the basic suitability of the candidate.

⇒ The selection interview can be:

- One to one between candidate and interviewer.
- Two or more interviewers by employees representatives - sequential.

○ By a panel of selections i.e. by more than representative of the employees.

Sequential interview:

- involves a series of interviews: each interview meeting the candidates separately.

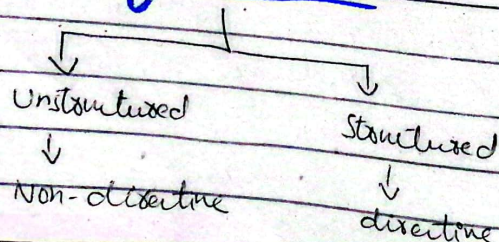

Panel of selection:

- Panel interview consists of two or more interviews meeting the candidates together.

Types of interviews

- Degree of structure
- Purpose of interview
- Content of interview

A) Degree of structure:

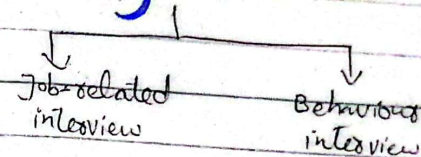

B) Purpose of interview:

- Predict future job performance
↓
stress interview

⇒ Made uncomfortable by series of awkward and guide questions.

C) Content of interview:

Background investigation:

⇒ The next step in the selection process is to undertake an investigation of those applicants who appear to offer potential as employees.

⇒ This may include contacting former employers to confirm the candidates work record and to obtain their appraisal of his or her performance / contacting other job related and personal references and verifying the educational accomplishments shown on the application.

7) Physical Examination

=> After the selection decision and before the job offer is made, the candidate is required to undergo physical fitness test.

=> Candidates are sent for physical examination either to the company's physician or to a medical officer approved for the purpose.

=> Such physical examination provides the following information:

1) Whether the candidate's physical measurements are in accordance with job requirements or not?

2) Whether the candidate suffers from bad health which should be corrected?

3) Whether the candidate has health problems or psychological attitudes likely to interfere with work efficiency or future attendance?

4) Whether the candidate is physically fit for the specific job or not?

8) Approval by appropriate Authority

=> on the basis of above steps, suitable candidates are recommended for selection by the selection committee or personnel department.

=> Though such a committee or personnel department may have authority to select the candidates finally, often it has staff authority to recommend the candidates for the selection to the appropriate authority.

9) Final Employment Decision

=> After a candidate is selected, the HR department recommends his name for employment.

=> The management or board of the company offers employment in the form of an appointment letter mentioning the post, the rank, the salary grade, the date by which the candidate ^{should} join and other terms and conditions of employment.

10) Evaluation

- ⇒ The selection process, if properly performed, will ensure availability of competent and committed personnel.
- ⇒ A period audit, conducted by people who work independently of the HR department, will evaluate the effectiveness of the selection process.
- ⇒ The auditors will do a thorough and the intensive analysis and evaluate the employment programme.

Why careful selection is important

- ⇒ Selecting the right employees is important for several reasons:
 - Performance (skills)
 - Costs
 - Legal obligations
 - ↳ equal employment law require non-discriminatory selection procedures
 - ↳ Negligent hiring: Hiring workers with questionable backgrounds without proper safeguards.

⇒ Negligent hiring means hiring employees with criminal records or other problems who then use them to customer homes.

Purpose of Selection

⇒ To achieve person-job-fit

Person-job-fit:

⇒ Refers to matching:

- 1) The knowledge, skills, abilities (KSAs) and competencies that are central to performing the job with
- 2) The prospective employee's knowledge, skills, abilities and competencies.

What characteristics should be in selection tool?

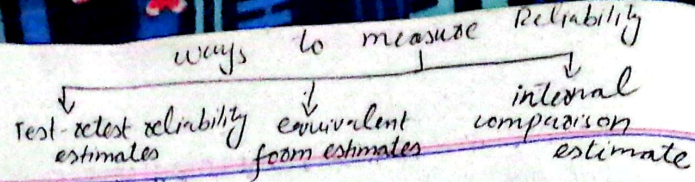

- Reliable
- Valid

Reliability: the consistency of your measurement instrument

- The degree which an instrument measures the same way each time it is used under the same condition with the same subject.

Note:

An instrument can be reliable but not valid.

Validity:

o The degree to which a test or instrument measure what it purpose to measure.

o The soundness or appropriateness of a test.

Validity asks:

o If an instrument measure what it is suppose to

o how "true" or accurate the measurement is

Types of validity

- o Test validity
- o Criterion validity
- o Content validity
- o Construct validity

Test validity:

o Test validity answers:

- Does this test measure what it purpose to measure?

- It refers to the correctness of the inferences that we can make based on the test.

eg if Jane's scores on possesses mechanical comprehension tests are higher than Jim's we can sure that Jane possesses more mechanical comprehension than Jim.

Note: A selection test must be valid, since, without proof of validity, there is no logical or legally permissible reason to continue using it to screen job applicants.

o In employment testing, there are two main ways to demonstrate a test's validity:

- o Criterion
- o Construct
- o Content

Criterion validity:-

o It ensures that the content of the test item correlates highly with the job content.

o * The content that choose for data entry test is a representative sample of what the person needs to know for the job. * exclude →

e.g. In selecting students for dental school many school give applicants chunks of chalk and ask them to carve something that looks like a brush.

if the content you choose for the test is representative sample of what the person needs to know for the job, then the test is probably content valid.

Content valid:

on back page

- refers to degree with which knowledge, skills

Criteria validity: are ability are tested.

o A Type of validity based on showing that scores on the test (predictor) are related to job performance (criterion)

o Demonstrating that who do well on the test and also do well on the job and that those who do poorly on the test do poorly on the job.

o if the criterion is obtained at the same time the test is given, it is called concurrent validity

o it is used when we want to determine if there is a relationship between behaviors measured by a test and behaviors involved in the job.

o if the criterion is obtained at a later time, it is called predictive validity

e.g.

To perform a particular job, score should be greater or equal to 80

Construct - validity:

o A test is construct valid if it demonstrate that a selection procedure measures a construct and that construct is important for successful job performance.

o it is used to measure abstract traits of an applicant.
example:

o for example when a bank decides to test its applicants for "numerical aptitude".

o To measure morals & honesty.

Write down Steps about validating a test.

- o The validation process consists of five steps:

Step 1: Analyze the job

Step 2: Choose the tests

Step 3: Administer the test

Step 4: Relate your test scores & criteria

Step 5: Cross validate & revalidate

Define the following terms.

Selection:

- o The process of choosing individuals with the correct qualifications needed to fill jobs in an organization.
- o Without these qualified employees, an organization is far less likely to succeed.
- o A useful perspective on selection and placement comes from two HR observations of HR that highlight the importance of effective staffing.
 - o Hire hard, manage easy
 - o Good training will not make up for bad selection.

Placement:

- o Fitting a person to the right job.
- o The ultimate purpose of selection is placement.
- o It is basically a matching process.
- o How well an employee is matched to a job can affect the amount and quality of the employee's work, as well as the training and operating costs incurred to prepare the individual for work life.

Person/job fit:

- o Selection and placement activities typically focus on applicants' knowledge, skills, and abilities (KSAs), but they should also focus on the degree to which job candidates generally match the situations experienced both on the job and in the company.
- o "Matching the KSAs of individuals with the characteristics of jobs".

Selection criterion:

- o Characteristics that a person must possess to successfully perform work is called selection criteria.

- motivation intelligence appropriate risk etc. it can be more specific to managerial jobs include
 - leading & deciding
 - supporting & cooperating
 - organizing & executing
 - enterprising & performing

Predictors of selection criteria:

- Measurable or visible indicators of Selection Criteria.

e.g. Three good indicators of "permanence" might be individual:

- interests
- Salary requirements
- Tenure on previous job.
- The person would stay longer on the job if a candidate possesses appropriate amounts of any or all of these predictors.

Organization-fit:

- The congruence between individuals and organizational factors.

(L2)

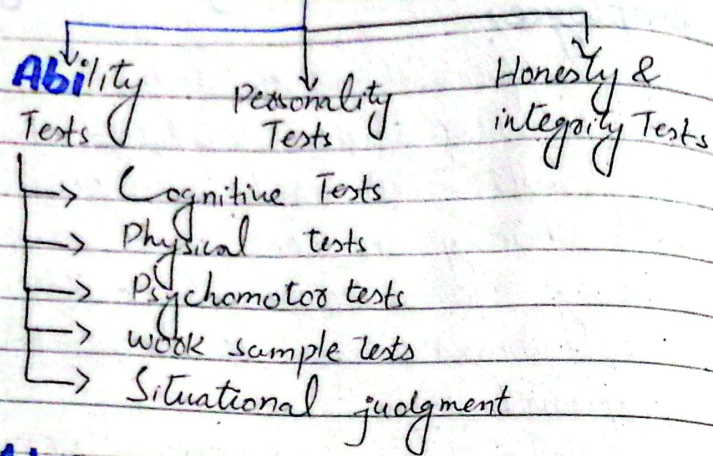

Discuss different types of tests that should be used for selecting an employee?

- ⇒ Many different kinds of tests can be used to help select qualified employees.
- ⇒ Literacy tests, skill-based tests, personality tests and honesty tests are used commonly for answering various individual questions that are important for the work to be performed.
- ⇒ These tests allow companies to predict which applicants will be the most successful before being hired.
- ⇒ The development of the test items should be linked to a thorough job analysis.
- ⇒ Adequate security and monetary value of these tests to the firm should be determined.

(Types of Tests)

- ⇒ There are different types of tests as follows:

Types of Tests

1) Ability tests:

=> Tests that assess an individual's ability to perform in a specific manner are grouped as ability tests.

=> These are also differentiated in some cases into:

- o Aptitude tests
- o Achievement tests

Aptitude tests:

=> These measure whether an employee or individual has the capacity or talent ability to learn a given job if adequate training given.

=> can you learn to do it?

Achievement tests:

=> When applicants claim to know something, an achievement test is given to measure how well they know.

Types of Ability tests

1) Cognitive ability tests:

=> Tests that measure an individual's thinking, memory, reasoning, verbal and mathematical abilities are called Cognitive ability tests.

=> These tests can be used to determine applicants' basic knowledge of terminology and concepts, word fluency, spatial orientation, comprehension and retention span, general and mental ability, and conceptual reasoning.

e.g.

Personnel Test

General Aptitude Test battery

⇒ These tests may be categorized as:

⇒ General intelligence tests

⇒ Aptitude tests

○ Mechanical Aptitude

○ Clerical Aptitude

○ Spatial Aptitude

2) Physical ability tests:

⇒ Tests that measure an individual's abilities such as strength, endurance, and muscular movement called Physical ability test.

⇒ Some physical ability tests measure such areas as range of motion, strength & posture, and cardiovascular fitness.

⇒ e.g. At an electric utility, line workers regularly must lift and carry equipment, climb ladders, and perform other physical tasks.

⇒ Testing for physical competencies reduce the chances of workplace accidents.

3) Psychomotor tests:

⇒ Psychomotor tests are skill-based tests.

⇒ Tests that measure dexterity, hand-eye coordination, arm-hand steadiness, and other psychomotor skills are called Psychomotor tests.

⇒ e.g.

MacQuaize Test for mechanical ability can measure manual dexterity for assembly line workers and others using psychomotor skills regularly.

4) Work Sample tests:

⇒ Measure the ability to do something other than their ability to know.

⇒ Tests that require an applicant to perform a simulated task that is a specified part of the target job called work sample test.

⇒ These tests should assess criteria that are embedded in the job that is to be staffed.

e.g.

An "In-basket" test is a work sample test in which a job

candidate is asked to respond to memos in a hypothetical in-basket that are typical of the problems experienced in that job.

5) Situational judgment tests

=> Tests that measure a person's setting judgment in work setting called situational judgment tests.

=> The candidate is given a situation and a list of possible solutions to the problem.

=> The candidate then has to make judgments about how to deal with the situation.

=> They are a form of job simulation.

2) Personality test:

=> Personality is a unique blend of individual characteristics that can affect how people interact with their work environment.

=> Many organizations use various personality tests that assess the degree

to which candidate attributes match specific job criteria.

=> Personality tests indicate employees' values and individual fit within the company culture and his personality leads to an increase in productivity.

=> Five big personality traits are useful predictors of various types of job performance in different occupations.

Conscientiousness	Agreeableness
o Achievement-oriented	o Cooperative
o Careful	o Good-natured
o Hardworking	o Softhearted
o Organized	o Tolerant
o Responsible	o Trusting

Extraversion
o Sociable
o Gregarious
o Talkative

Emotional stability	Openness to experience
o Neurosis	o Curious
o Depression	o Original
o Anger	o Broad-minded
o Worry	o Open to new ideas
o Insensitivity	o Flexible in thought

e.g. - calipers profile etc.

i) Faking Personality tests:

- => "Faking" is a major concern for employers using personality tests.
- => many test publishers admit that test profiles can be falsified and they try to reduce faking by including questions that can be used to compute a social desirability.

3) Honesty/Integrity test:

- => Companies are utilizing different tests to assess the honesty and integrity of applicants and employees.
- => Employers use these tests as screening mechanism to prevent the hiring of unethical employees; to reduce the frequency of lying and theft on the job.
- => Some questions an employer can ask on an integrity test include:
 - o Is it ethical to publish work samples on your website?
 - o If a client asks you to do something illegal, do you do it?

o How would you act if a manager or coworker gave you a task that violates company policy?

Polygraph

- => Refer to as lie detector, is a mechanical device that measures a person's galvanic skin response, heart rate and breathing rate.

Controversies in Selection Testing

- => Two areas in selection testing generate controversies and disagreements.
 - 1) Appropriateness of general mental ability testing
 - 2) Validity of personality testing for selection

(L3)

Q# Why interview is imp?
Who conduct interview?
effectiveness interview, problems in interview?

Interview:

=> According to Julius Michael:

"An interview is a face-to-face, oral observational and personal appraisal method."

=> It is used as a means of getting information from the candidate.

=> It also includes give information that will help the applicant make his mind about the company.

Purpose:

1) Obtain additional information about the candidate

2) Clarify information gathered through the selection process.

Levels where interview are conducted:

=> Interviews are commonly conducted at two levels:

1) Initial screening interview

=> To determine if the person has met minimum qualifications.

2) In-depth interview

=> With HR staff members and operating managers to determine if the person will fit into the designated work area.

*Who Conduct interviews?

=> job interviews can be conducted by

- Individual.

- By several individuals sequentially

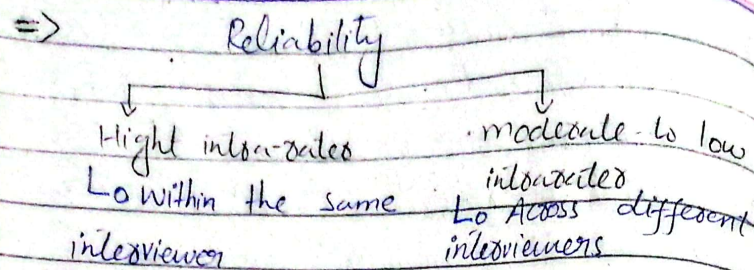

=> For some jobs, such as entry-level services lesser skills, so applicants might be interviewed solely by a HR professional

=> For jobs that require more skills, applicants might be screened by multiple interviews beginning with HR professional and followed by the appropriate supervisor and managers.

=> Selection decision is made collectively.

*Inter-Rater reliability & face validity

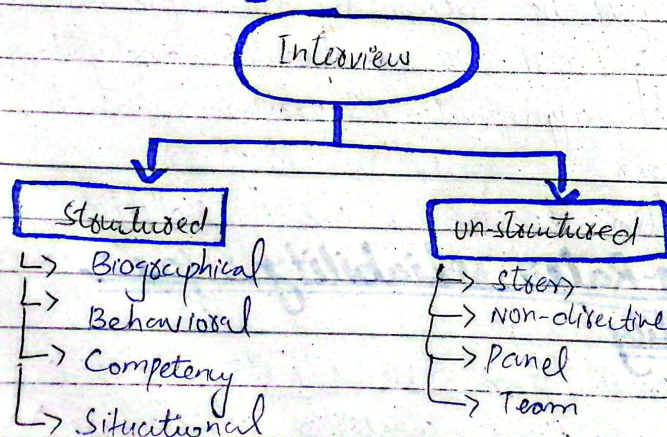

=> Interview must be reliable, to pick the same applicant capabilities again and again.

=> Interview validity refers to whether interview questions map to specific competencies listed on the competency Assessment worksheet.

=> To ensure maximum validity, there needs to be a one-to-one correspondence between interview questions asked and underlying competency.

Types of Interviews

Structured interviews

=> Interview that uses a set of standardized questions asked of all applicants.

o that comparison can be made easily.

=> In this type of interview, an interviewer prepare job-related questions in advance.

=> Useful in initial screening process.

=> Does not have to be rigid.

Advantages:

o Structured format ensures that a given interviewer has similar information on each candidate.

o So, there is greater consistency

o Utilized efforts of selection for federal jobs

Disadvantages:

=> The questions need development, review, and testing to approve and implement.

=> Pre-planned set of questions is at risk of being rehearsed, which can help the applicants game the system.

=> The questions may not seem relevant to each individual applicant.

How to conduct structured interviews?

⇒ Requires more planning, but they have some very definite steps:

- 1) Brainstorm, develop and document questions
- 2) Create a rating scale
- 3) Point out the questions
- 4) During interview take notes on every candidate
- 5) Then evaluate answers of each candidate.

Types of Structured Interviews

1) Biographical interview:

⇒ A type of interview where the interviewee is asked to discuss their life in chronological order, starting from school age to present day.

⇒ Also called chronological interview.

⇒ widely used and often combined with other interview techniques.

⇒ The overall process, provides sketch of past experience.

2) Behavioral interview:

⇒ Behavioral interview is a type of interview in which focus on a candidate past experiences to know how they have navigated specific situations and utilized skills relevant to the position.

⇒ How they have performed certain task or handled problem in the past.

⇒ it shows or predict future actions and show how applicants are best suited for current jobs.

⇒ Questions that might be ask:

- Tell about time when you initiate a project?
- what was the situation?
- what did you do?
- what were the results?

3) Competency interview:

- => Competency interview are similar to behavioral interview
- => Except the questions are designed to provide the interviewee with something against which to measure the applicants response
- => How you have used specific skills in your previous experience.
- => ^{cons} Take more time

4) Situational interview:

- => Are similar to behavioral interview questions - but they are focused on the future, and ask hypothetical questions, whereas behavioral interview questions look at the past.
- => Ask questions:
How applicants might handle specific job situations?

5) Unstructured - interviews

=> A type of interview in which questions are not preplanned to ask from applicants are called unstructured interviews.

=> In unstructured interviews open-ended questions are asked from interviewee.

=> These interview may be appropriate for just finding but not best for selection of candidates.

=> Also-called: casual, free-flow or informal interviews.

Advantages:-

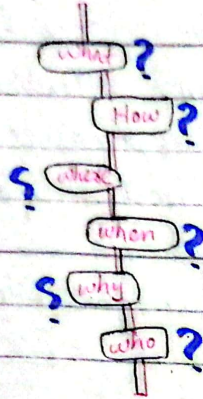

- => Communication skills of candidates can be easily assessed.
- => very flexible and more comfortable.
- => Lack deep knowledge of the interviewee on a particular topic.

Disadvantages:-

- => Time consuming
- => Chances of diversion from the purpose
- => The variation of questions can be difficult to compare from one candidate to another for same post.
- => Unfair Assessment

Characteristics of unstructured interview:

=> Open-ended questions

• what are you most excited about with this job?

• what do you like to do in your spare time?

=> Spontaneous -> main questions prepared.

=> Silence => Non-biased analysis

Steps to conduct unstructured interview:

- 1) Set goals for your interview
- 2) Keep flexibility
- 3) Start with open-ended questions
- 4) Use their resume and application as starting points for additional questions

Types of Unstructured Interview

1) Non-directive interview:

=> Interview that uses questions developed from the answers to previous questions.

=> This is designed to let the interviewee speak his mind freely.

=> The interviewer asks general questions designed to prompt applicants to describe themselves.

=> The interviewer asks general questions then uses applicants responses to shape the next question.

2) Stress interview:

=> A type of interview that is designed to test the candidate and his conduct and behavior by putting him under conditions of stress and strain.

=> In a stress interview, the interviewer assumes an extremely aggressive and insulting posture.

=> This approach is used because employees will encounter high degree of job stress.

3) Panel interview:

=> A type of interview is when two or more people interview you at the same time.

=> Panel members can include potential supervisors, managers, team-members, HR specialist, and other decision makers within a company.

4) Team interview:

=> A type of interview in which applicants are interviewed by the team members with whom they will work.

=> This is designed to see how the candidates react to and against each other.

=> All the candidates may be brought together in the office and they may be interviewed.

How to make interview more effective?

Interviewing skills are developed through training.

A number of suggestions for making interviewing more effective are:

- o Plan the interview
- o Control the interview: what info must be collected.
- o Use effective questioning techniques

Questions to avoid

- o Yes/No questions
- o Obvious questions
- o Leading question
- o Questions that rarely produce true answers.
- o Illegal questions
- o Questions that are not job related.

Listening response to avoid

=> Effective interviewers avoid listening responses such as:

- o Nodding
- o Pausing
- o Echoing
- o Mishearing

Problems in the interview

- Snap judgment
 - Negative emphasis
 - Biases and stereotyping
 - cultural noise
-
