

Topic:

Toggle Button

⇒ Toggle Button is used to display checked and unchecked state of a button.

⇒ Toggle Button basically an on/off button with a light indicator which indicate the current state of Toggle button.

eg ToggleButton is doing on/off in sound, Bluetooth, wifi, hotspot etc.
it is a subclass of Compound button.

1. How to check current state of Toggle button?

⇒ To check current state of a toggle button is `isChecked()` method is used.

⇒ This method returns a Boolean value either true or false.

⇒ if toggle button is checked then it returns true otherwise it returns false

/* Add onCreate() function
after setContentView() */

ToggleButton simpleTB = (ToggleButton)
(R.id.SimpleToggleButton);
Boolean ToggleButtonState = SimpleTB.isChecked;

Attributes of toggle button:

- o id
- o checked used to set the current state of toggle button.
- o gravity
- o textOn and textOff attribute is used to set the text when toggle button is checked on/off state.

- o textColor, style, size etc.
- o drawableBottom, drawableTop, drawableRight and drawableLeft:

These attributes draw the drawable below, top, right and left of the text of ToggleButton.

Example 1:

.xml file

<ToggleButton

android:id="@+id/toggleButton"

android:layout_width="100dp"

android:layout_height="100dp"

android:textOn=""

android:textOff=""

android:background="@drawable/btnshape"

android:drawableTop="@drawable/btnselector"

>

<TextView

android:layout_width="wrap_content"

android:layout_height="wrap_content"

android:text=""

android:id="@+id/txt1"

>

btnselector.xml file

<item id: state-checked="true"

android:drawable="@drawable/ic_baseline_bluetooth-24"

<item id: state-checked="false" android:

drawable = "@drawable/ic_baseline-
bluetooth_disabled_24" />

MainActivity.java.

ToggleButton
TextView
// Add after setContentView()

ToggleButton = findViewById (R.id.toggleButton);
TextView = findViewById (R.id.txt1);
textView.setText ("Off");

toggle Button. setOnClickListener
(new View.OnClickListener()
@Override

public void onClick (View v)
{

if (toggleButton.isChecked())
{

textView.setText ("On");
}

else

{

textView.setText ("Off");

}

}
