

Tools for DWH

- o MS SQL
- o Teradata

① MS SQL

⇒ Microsoft SQL Server.

Flexibility & versatility:

- o can handle wide range of work loads, including DWH.

Integration with MS ecosystem:

- o Integrates with other Microsoft products like Power BI, Azure & SSIS

Scalability:

- o can scale horizontally and vertically to handle large datasets.

Uses:

- o Smaller to medium sized DWHs
- Cost: Lower cost

2. Teradata:

High Performance & scalability.
Designed specifically for
large-scale data warehousing
& analytics.

Reliability & availability:

- High availability & data recovery features.

Use:

- Extremely large DWH
- Highest cost

Some Questions for General Knowledge

DWH Level:

→ There are two levels:

1. DWH Schemata
2. Deployment schema

Data Mart Level:

→ That's are:

- Bus & overlapping matrices
- Operational schema
- Data-staging schema
- Domain Glossary
- Work-load & users
- Logical schema
- Physical schema
- Testing

Fact Level:

→ There are two levels:

- Fact schemata
- Attribute & Measure Glossaries
