

Ch# Training

=> Training is the "foundation stone" of human resource management.

=> Proper selection and recruitment are not sufficient for the building of manpower.

=> There has been rapid development in the field of science and technology.

=> Training must be for both new and old employees.

=> Training is a continuous process.

=> All organizations need trained and experienced employees for performing different HR activities.

=> If the knowledge and skill of the employee fulfil the requirements of the present job, there is no need of training.

Meaning & Definitions of Training

=> Training is that process by which the efficiency of the employees increases and develops.

=> Training is a specialized knowledge which is required to perform a specific job.

According to Edwin B. Flippo,

"Training is the act of increasing the knowledge and skill of employees for doing a particular job"

=> it is the process by which people acquire capabilities to perform jobs.

=> it provides employees with specific identifiable knowledge and skills for use in their present job.

for examples

=> Organization training may include teaching of "hard skills" such as how to use internet - a branch manager how to review income statement.

=> "soft skills" may also be critical such as mentoring, communicating, managing a team etc.

Objectives of training / Importance

=> Training is a continuous process. Objectives of training are determined by the personnel manager keeping in view the overall objectives of the organization.

=> Main objectives of training are as follows:

- 1) To prepare the employees for present and future organisational requirements.

- 2) To prevent manpower obsolescence
- 3) To improve the morale of the employees
- 4) Improvement in quality of work
- 5) To prepare the employees for higher level jobs.

6) Less supervision

7) Improvement in efficiency of employees

8) To maintain the supply of employees

9) Development of knowledge and skills

10) Modifying the attitude of employees

11) Best utilization of resources

12) To build up a second line of competent officers

Benefits of training:

- o Reduction in wastage
- o Reduction in accidents
- o Reduction in absenteeism and labour turnover
- o Decreased need for supervision

Training policy:

=> Personnel department is responsible for arranging the training.

=> However, appropriate training policy is decided by top management. Before taking training policy decision, the management should study the following factors:

- => why is training needed?
- => what objectives can be achieved by training?
- => who is responsible for conducting training?
- => whether the training will be formal or informal?
- => what are the priorities of training?
- => what is the type of training? general or specific?
- => when and where the training is to be conducted.
- => what sources be put to use for training?

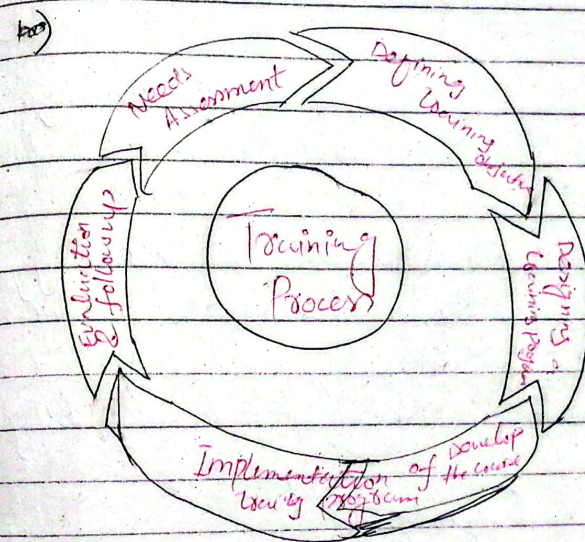

A training policy must incorporate the following:-

- o must clarify the approach of the organization towards the development of employees.
- o serve as guideline for framing and implementing training program.

Training Process

=> Training process comprises a series of steps that needs to be followed systematically to have an efficient training programme.

=> It generally involves six steps.
Steps involved

1) Need Assessment:

- => In this step it is decided that how the entire training process will flow.
- => This assessment directs the whole training programmes like what, when,

→ why, where and who program the training programming.

⇒ In order to compete effectively, firm must keep their employees well trained.

⇒ The overall purpose of the assessment phase is to determine if training is needed and, if so, to provide the information required to design the training program.

⇒ It should address the employee long term training needs and its current training needs.

⇒ If the program is to use technology, the manager should also include a review of the technology.

→ Assessment consists of three levels of analysis:

Organizational

Task

Personal

Organizational Analysis:

⇒ It is the examination of the kinds of problems that an organization has is experiencing and where they are located

within the organization.

Task / Operational Analysis:

○ An Operational analysis identifies the kinds of the skills and behaviors required of the incumbents of a given job and the standards of performance that must be met.

Personal Analysis

○ The objective of the personnel analysis is to examine how well individual employees are performing their jobs.

○ Training should be given to those who need to it.

○ Assigning all employees to a training program, regardless of their skill levels, is a waste of organizational resources and create a unpleasant situation for employees who do not need training.

○ Determining Training Needs:

○ Following sources can help organization to assess either there is a need for training or not.

- Self-Assessments
- Company records
- Customer complaints
- New Technology
- Employee grievances
- Observation

2) Developing Training Objective:

⇒ Objectives are desired end results. In human resource, clear and concise objective must be formulated.

⇒ The objective of training must be classified, related to the areas identified in the task analysis, and should be challenging, precise, achievable, and understood by all.

⇒ Mostly when there is performance gap i.e. the performance not up to the specified standards training is devised to improve the performance. There are certain factors that should be kept in mind before conducting training. These factors are:

- Number of employees experiencing skill deficiency.

⇒ No. of employees supposed to be trained.

- Severity of skill deficiency.

⇒ What are the cons and pros that are being faced by the organization due to absence of that skill?

- Importance of skill.

⇒ How important is skill to be possessed by workforce.

• Extent to which skill can improve training.

⇒ Would there be real difference in skill level in case the training program is conducted.

3) Designing Training program:-

⇒ After the need assessment, the manager next design the overall training program.

⇒ Design means planning the overall training program including:

- Training objectives (who will be the trainees)
- Delivery methods (who needs to be trained)
- Program evaluation (training methods)

⇒ The design should also summarize of how you plan to set a training environment that motivates trainees both to learn and to transfer what they learn to the job.

⇒ In design phase, the manager decide:

- possible training content

- Estimate a budget for the training program.

⇒ The following ways to design training program:

- 1) Creating a motivational learning environment

- 2) making the learning meaningful.
- 3) make it easy to transfer new skills and behaviours from the training site to the job-site.
- 4) Reinforcing the learning

4) Developing the Program:

=> Program development means actually creating the program's training content and materials.

=> Also means choosing the actual content the program will present, as well as choosing the specific instructional methods, such as

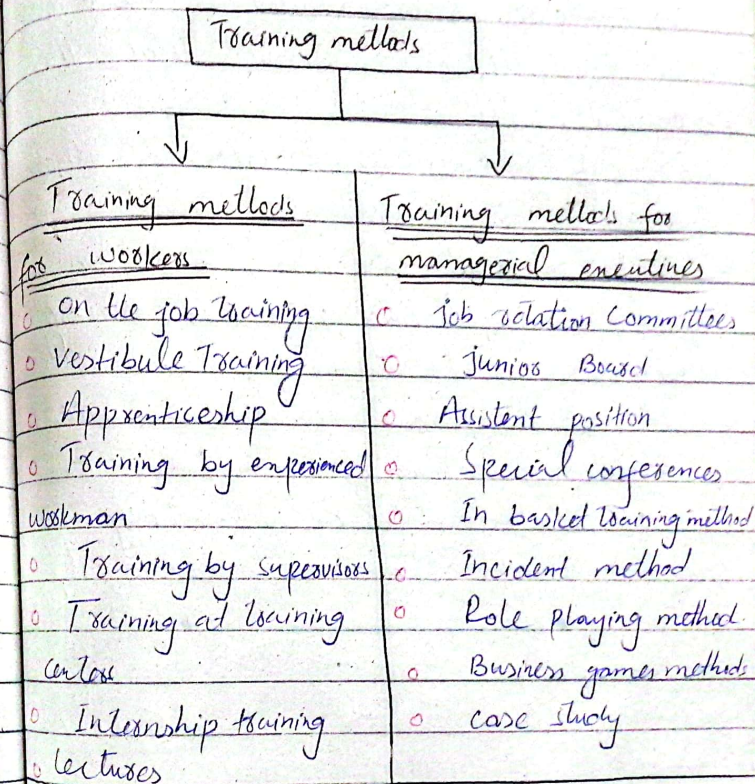

- o Lectures
- o cases
- o web-based etc.

=> Training equipment and materials include :-

- o ipads , workbooks , lectures
- o powerpoint slides , web and computer based activities , learner resources and support material.

5) Implementing training programs:-

- 1) when objectives set and the program designed and budgeted, you can turn to implementing the training program.
- 2) Implementing means actually doing the training, using one or more of the training methods.

6) Evaluating the Training Effort:-

=> In this phase the effectiveness of the training is assessed.

=> it can be measured in monetary or non-monetary terms.

=> The manager should evaluate the training program.

=> There are several things that we can measure:

- 1) Evaluate trainees reactions to the program.
- 2) what the trainees learned from the program
- 3) Ask whether the trainees on the job behavior changed
- 4) what results did we achieve, in terms of the training objectives previously set.

=> Two basic issues are addressed while evaluating training programs:

- 1) Design of the evaluation study
- 2) what should we measure

Q# What are different types of training & discuss its methods? (PP-2012) Long

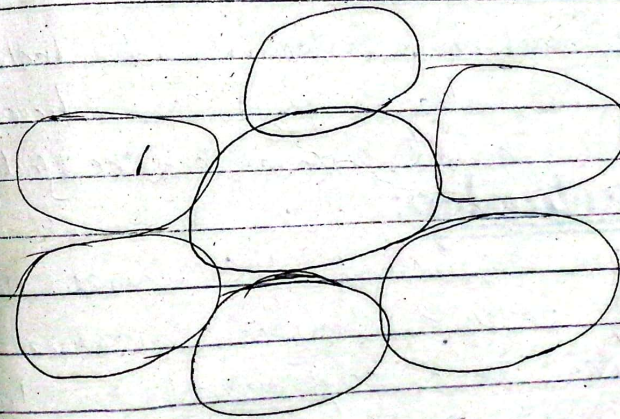

=> There are two types of training:

- 1) On-the job training
- 2) off-the job training

1) On the job:

=> This type of training is imparted on the job and at work place where the employee is expected to perform his duties.

=> Also based on the principle "Learning by doing knowledge".

1) Job-instruction Training:

- ⇒ Training workers through a simple break down of steps is easy to understand and complete.
- ⇒ Giving instructions one by one.
- ⇒ Instructions are given by experienced business.

1) Vestibule Training:

- ⇒ Under this method, training is imparted in a special training centers called vestibule training.
- ⇒ Under this method, actual work conditions are created in a class room or a workshop.
- ⇒ The machines, materials and tools under this method is same as those used in actual performance in the factory.

2) Apprenticeship:

- ⇒ Under this method, the trainee is placed under a qualified supervisor or instructor for a long period of time depending upon the job and skills are required.
- ⇒ wages paid to the trainee are

- Also called job shadowing.
much less than those paid to unqualified workers.

3) Job rotation:

- ⇒ Teaches current employees how to do various jobs over time.
- ⇒ The employee will rotate around to different jobs within the organization performing various different tasks unrelated to his original job.

4) Coaching:

- ⇒ A more experienced or skilled individual provides an employee with advice and guidance.

5) Mentoring:

- ⇒ is an ongoing relationship that is developed between a senior and junior employee.
- ⇒ Mentoring focus on attitude development.
- ⇒ Conducted for management level employees.
- ⇒ It helps in identifying weakness and focus on the area that needs improvement.

Understudy: Trainee become understudy

when they are trained by superior
=> A trainee who is likely to assume the full duties and responsibilities of the position currently held by his/her superior is called as an understudy.

Off-the job training

=> Also called "learning by gaining knowledge."

=> Off-the-job training refers to an educational method where employees learn more about their job or the latest advancements in their field at a location away from their workplace.

Methods: => This type of training essentially helps employees perform their job more efficiently.

1) Lectures:

=> A direct method of instruction that involves a verbal presentation of information by an instructor to a large audience.

=> The instructor organises the material and gives it to a group of trainees in the form of talk.

ii) Case study:

=> A method which provides descriptive situations which stimulate trainees to make decisions.

=> The purpose of the case study is to make trainees apply what they know, develop new ideas to manage a situation or solve a problem.

iii) Simulations:

=> A kind of training created to mirror real-life situations

=> Duplicate the actual work environment

=> These are two common methods of training of simulations:

- 1) Role-playing
- 2) business game

Role play:

=> An active learning strategy that involves participants to perform realistic scenarios under the supervision of a trainer or facilitator

=> its purpose is to increase the trainee skills in dealing with other people.

In-basket Training:-

- ⇒ Helpful in enhancing decision making skills.
- ⇒ Also known as in-tory training.
- ⇒ The employees are given information about an imaginary company, its activities and products.

Group discussion:

- ⇒ A type of discussion that involves people sharing ideas or activities.
- ⇒ People in the group discussion are connected on basic idea.
- ⇒ Based on the idea, everyone in the group represents his perspective.

Sensitivity Training:

- ⇒ Training is related to sensitivity and emotions.
- ⇒ Psychological technique in which intensive group discussion and interaction are used to increase individual awareness of self and others.
- ⇒ Also known as T-group or encounter group training.

Business games:

- ⇒ Under this method, trainees are divided into teams.
- ⇒ It refers to the training method for managers.
- ⇒ This form of training is based on an artificial environment that stimulates the real situation in the management of the organization, whether its planning, decision making, control, communication or management itself.

Merits of Training:

- 1) Increased job satisfaction
- 2) motivated workers
- 3) Employee participation
- 4) Lowering employees turnover & absenteeism.
- 5) Creating a pool
- 6) Less supervision
- 7) Easy to implement change

Difference between Training & development:

<u>Training</u>	<u>Development</u>
<u>Level of persons involved:</u>	
⇒ it is meant for supervisors and operative level employees.	⇒ it is means for managerial levels.
<u>Objective</u>	
⇒ Short-term reactive process for operatives and process.	⇒ Continuous ^{Pro-active} process meant for executives
<u>Aim:</u>	
⇒ To develop additional skills	⇒ To develop a total personality
<u>Focus:</u>	
⇒ Focus on technical skills	⇒ focus on conceptual & human ideas

Orientation/Induction

⇒ Technique in which a new employee is introduced to the purpose, policies and practices of the organization.

Orientation types

work unit

Organization
